

Ideation Phase

Define the Problem Statements

Date	25 July 2026
Name	Shaik Suhail
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement Template:

Overview

A well-articulated customer problem statement focuses on what matters most to create experiences users will value. By framing challenges from the perspective of key stakeholders—both the end users requesting network services and the fulfillment engineers processing them—we ensure the ServiceNow solution directly addresses real operational friction points.

The discovery phase revealed that the legacy framework for managing corporate network provisioning depends heavily on fragmented, decentralized communication pathways—such as unmonitored shared mailboxes, manual spreadsheet tracking, and informal verbal requests. This structural deficiency introduces severe operational vulnerabilities:

- **Deficient Metadata Collection:** Requesters frequently omit business-critical physical infrastructure variables—such as device context requirements, terminal extension layouts, or exact structural building coordinates—triggering prolonged backend clarification cycles.
- **Absence of Process Transparency:** Requests routinely stall indefinitely within administrative queues due to the lack of an automated workflow engine or dynamic managerial authorization routing.
- **Systemic Data Integrity Decay:** Manual transcription and data-entry practices introduce frequent clerical errors, resulting in mismatched hardware serial configurations, broken asset lifecycle dependencies, and flawed network configuration records.

Customer Problem Statement Template

I am	<i>Describe customer with 3-4 key characteristics - who are they?</i>	An enterprise employee / business user relying on network infrastructure (VPN, Firewall rules, VLAN allocation) to perform daily job functions.
I'm trying to	<i>List their outcome or "job" the care about - what are they trying to achieve?</i>	Quickly request network access or configuration changes and track real-time fulfillment status through a centralized portal.
but	<i>Describe what problems or barriers stand in the way - what bothers them most?</i>	Requests take days to resolve, requiring constant follow-ups via email , with zero visibility into approval progress.
because	<i>Enter the "root cause" of why the problem or barrier exists - what needs to be solved?</i>	The organization relies on manual, email-based requests and static forms lacking automated approval routing, input validation, and task generation.
which makes me feel	<i>Describe the emotions from the customer's point of view - how does it impact them emotionally?</i>	Frustrated, blocked, and unproductive , as work delays hinder project delivery dates.

Customer Problem Statement Template

I am Describe customer with 3-4 key characteristics - who are they? PS-1 An End User / Employee requesting network access or firewall changes. PS-2 A Network Operations Engineer responsible for task fulfillment.	I'm trying to List their outcome or "job" they care about - what are they trying to achieve? PS-1 Submit a network request and track its fulfillment status in real-time. PS-2 Execute network changes quickly with complete technical parameters.	But Describe what problems or barriers stand in the way - what bothers them most? PS-1 Fulfillment takes days and I have zero visibility into approval progress. PS-2 Requests arrive via email with missing IP ranges or device details.	Because Enter the "root cause" of why the problem or barrier exists - what needs to be solved? PS-1 The current process relies on manual emails and static forms without automated routing. PS-2 There are no mandatory validation fields or automated catalog workflows in place.	Which makes me feel Describe the emotions from the customer's point of view - how does it impact them? PS-1 Frustrated and unproductive due to project delays. PS-2 Overwhelmed by unnecessary back-and-forth communication.
