

Functional & Performance Testing Template

Model Performance Test

Date	26 July 2026
Name	Shaik Suhail
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Test Scenarios & Execution Results Table

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text & IP Input Validation (e.g., Subnet, IPv4, Device Name)	Enter valid IPv4 format (192.168.1.1) and invalid text strings in target IP fields on Service Portal.	Valid IPv4 format accepted; dynamic UI error thrown for invalid format.	Input validated via Catalog UI Policy Regex successfully.	Pass
FT-02	Port & SLA Range Validation (e.g., VLAN ID, Port Number)	Enter numbers within valid range (VLAN 1–4094) and outside range (-5, 9999).	Accepts valid range values; shows field error message for out-of-range inputs.	Out-of-range values blocked immediately on submit.	Pass
FT-03	Workflow Execution & Task Generation	Provide complete network request details and click "Submit" on portal.	RITM created, approval routed to Line Manager, and sc_task generated upon approval.	Flow Designer triggered and sc_task auto-created with mapped variables.	Pass
FT-04	Integration & REST Spoke Connection Check	Check if ServiceNow REST API connection to	MID Server / REST API connection status	Connection test passed with HTTP	Pass

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
		Network MID Server is active and responding.	responds successfully with 200 OK.	200 OK response.	
PT-01	Form & Workflow Response Time Test	Use execution timer to test portal form load time and Flow Designer task generation time.	Form load and workflow execution should be under 3 seconds.	Average page load was 1.2s; flow executed in 1.8s.	Pass
PT-02	Concurrency & API Speed Test	Send multiple concurrent REST API network request submissions simultaneously.	ServiceNow engine handles concurrent requests without throughput degradation.	Handled 50 concurrent sessions with 0% error rate.	Pass
PT-03	Architecture Diagram Attachment Load Test	Upload multiple large PDF network architecture topology files during request submission.	Upload completes smoothly without portal session timeout or crash.	Attached 25MB topology PDFs without memory bottleneck.	Pass
